Concept 1

Concept 1

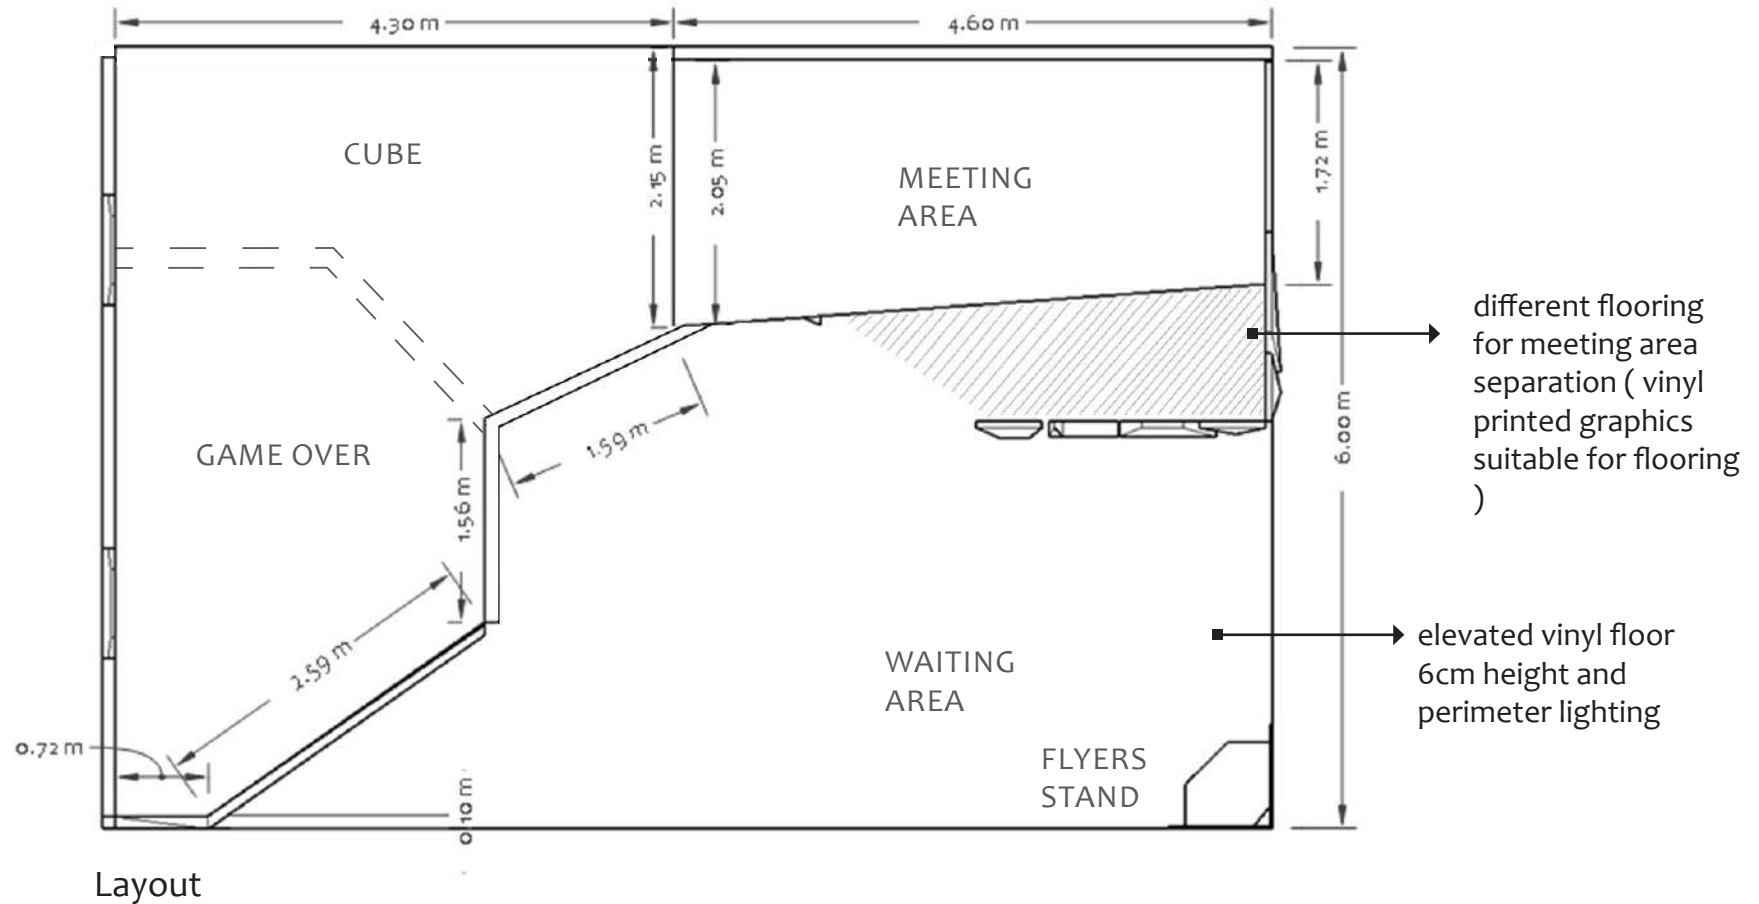

Wooden panels placed along the side walls of the rooms, as shown (thickness : 8cm)

All lighted surfaces on the 3d visuals are led stripes covered with white translucent acrylic plexiglass or similar material resulting to the same light spreading effect

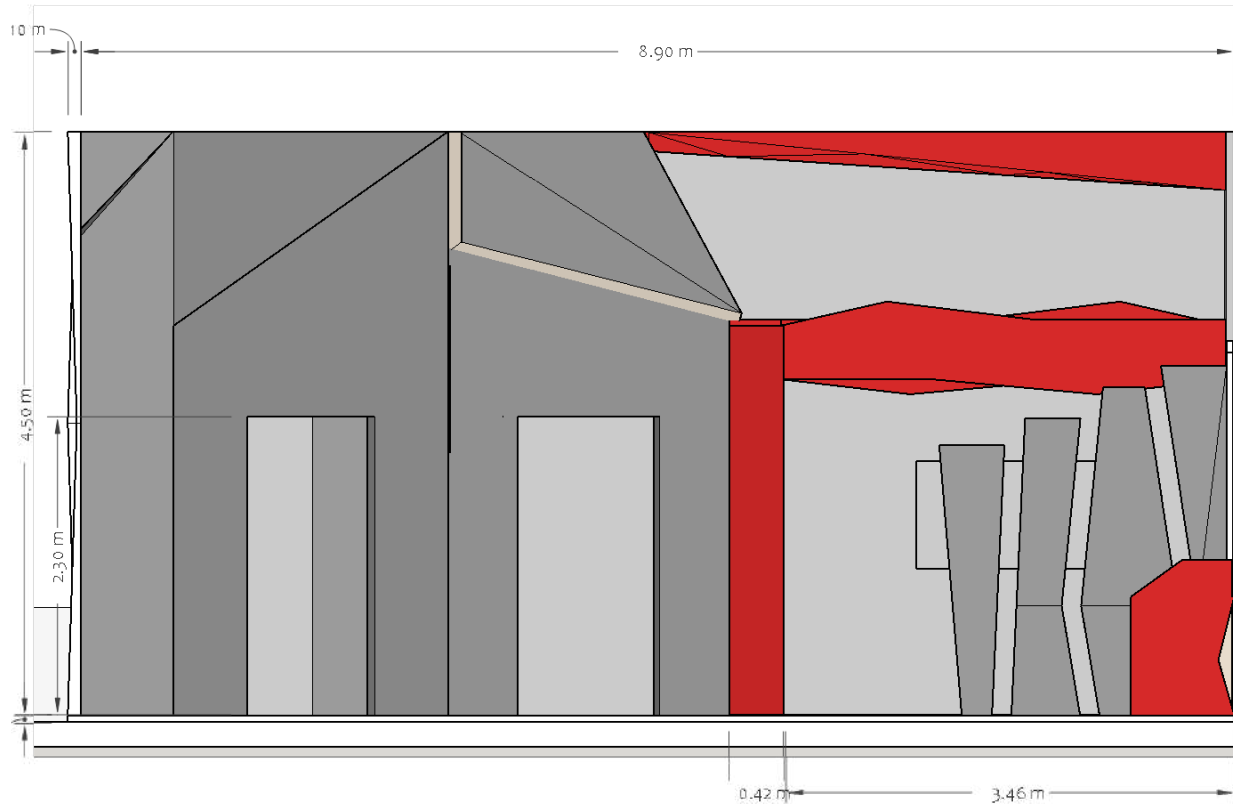

Front view

Concept 1

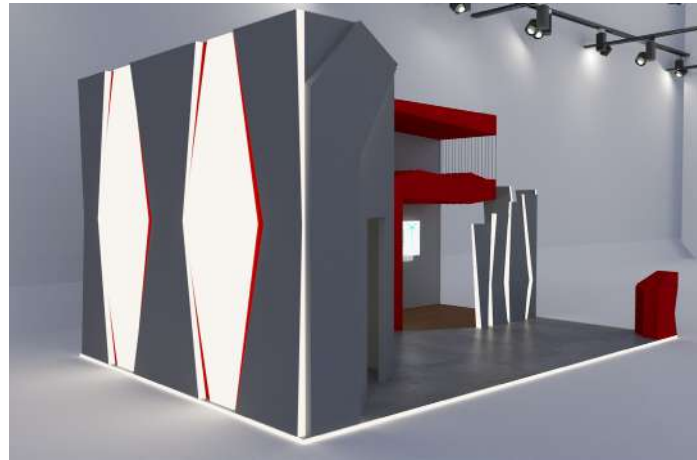

Concept 1

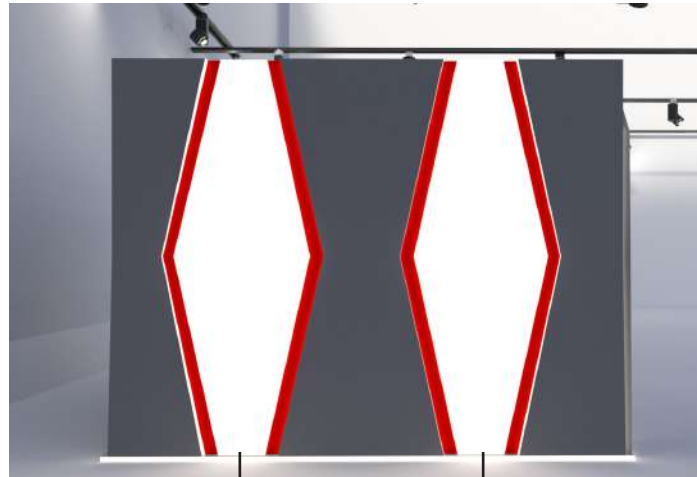

Front view - parallel

Concept 1

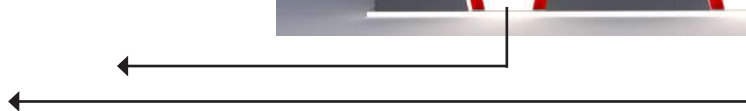

3d panels in different angles to create an inside-out effect.

The grey panels will have graphic wall wraps and the light ones will be lightboxes, while maintaining their 3d effect. The lightboxes will have graphics placed on the inner side of the surface (i.e pvc fabric printed graphic)

2 lightboxes

Left side view

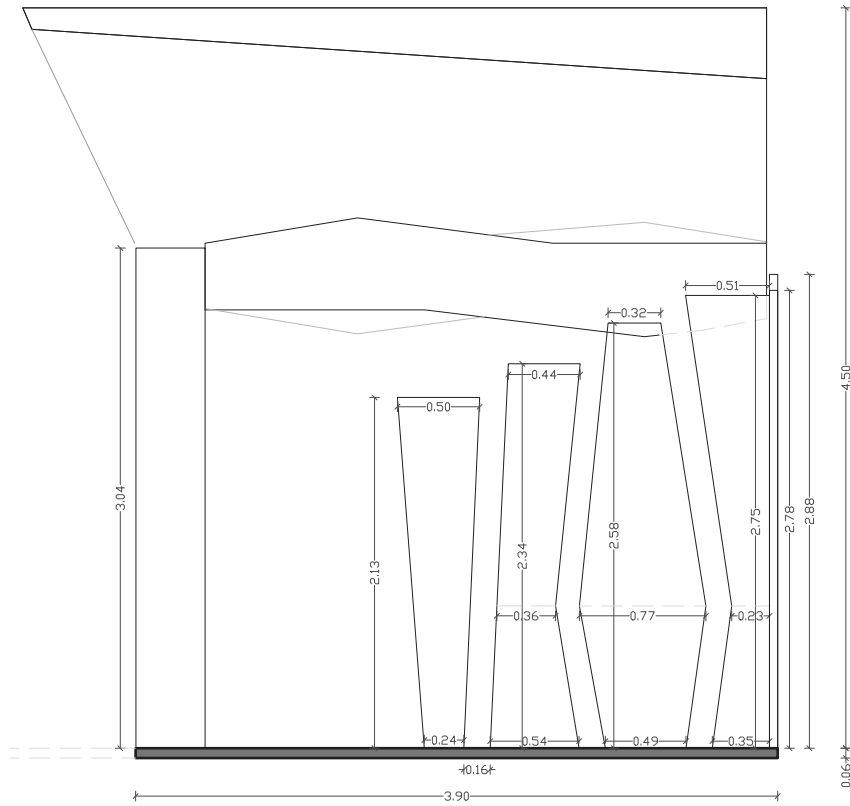

Concept 1

Same idea with left side view of the booth, creating a 3d effect with narrow and wider sides

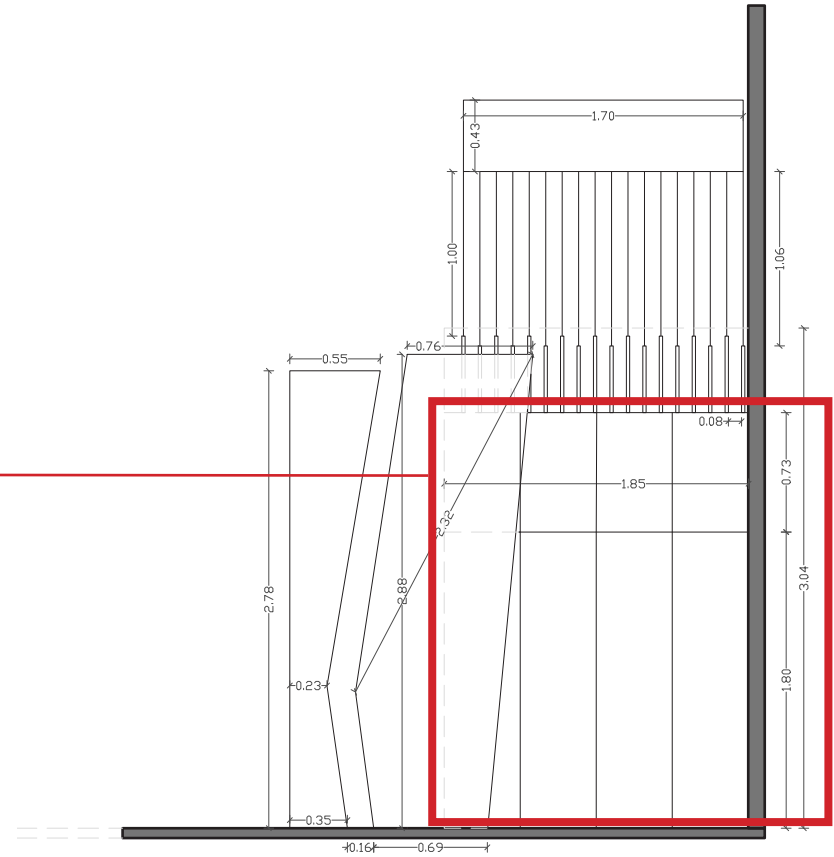

Meeting Dividers_3D

Meeting Dividers_elevation_right side view

Concept 1

18 items

painted panels with lacquer technique coating, with led stripes on one of the narrow sides (on 6 items) - thickness 2cm

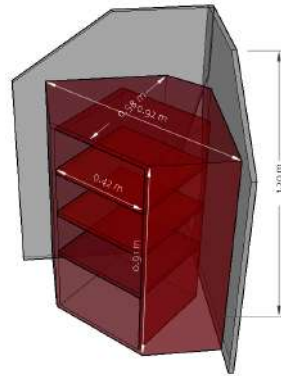

either wooden or metallic rods (1cm diameter)

Hanging decorative corner-shaped panels

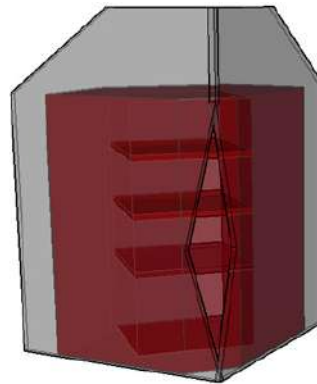

Concept 1

lacquer technique coating

opening for shelves

side view flyer's stand

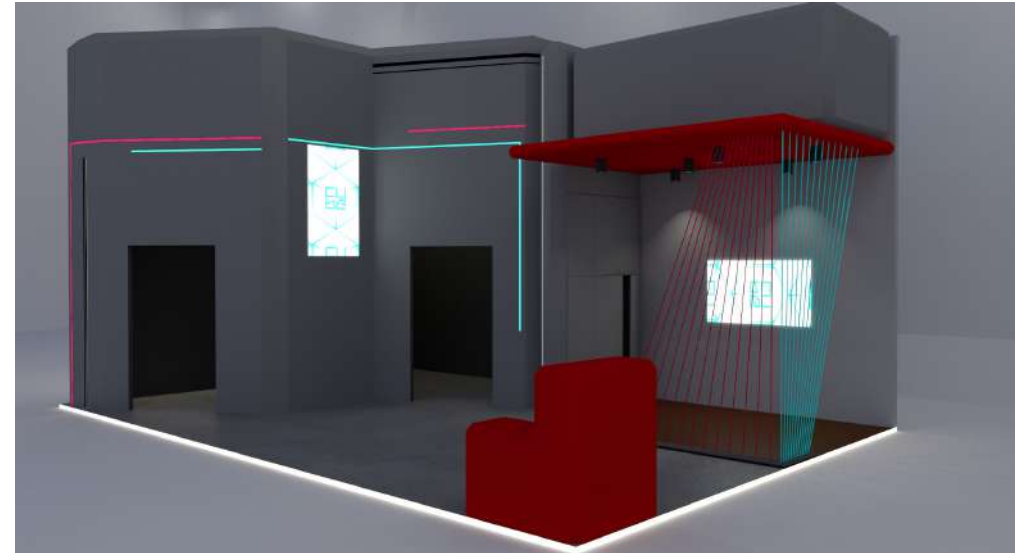

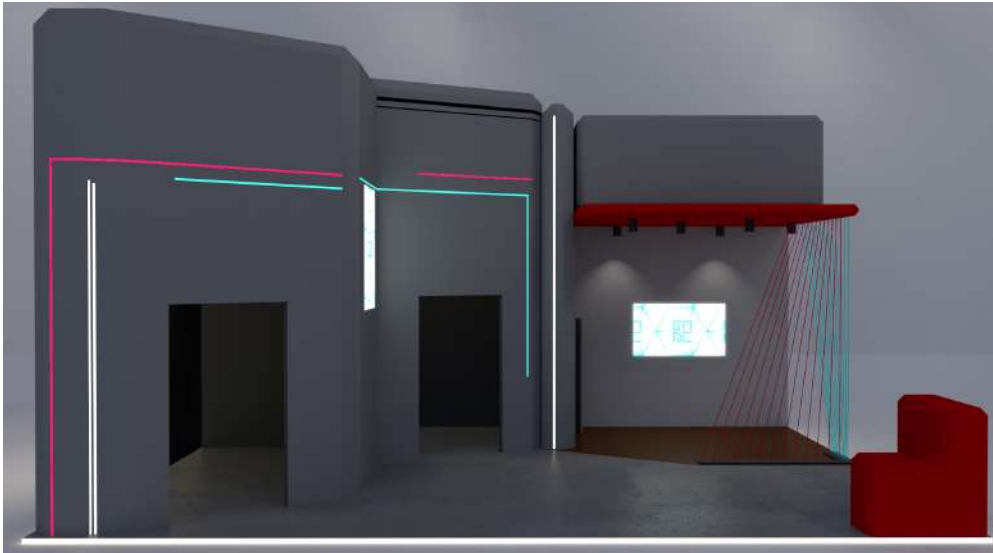

back view flyer's stand

Concept 1

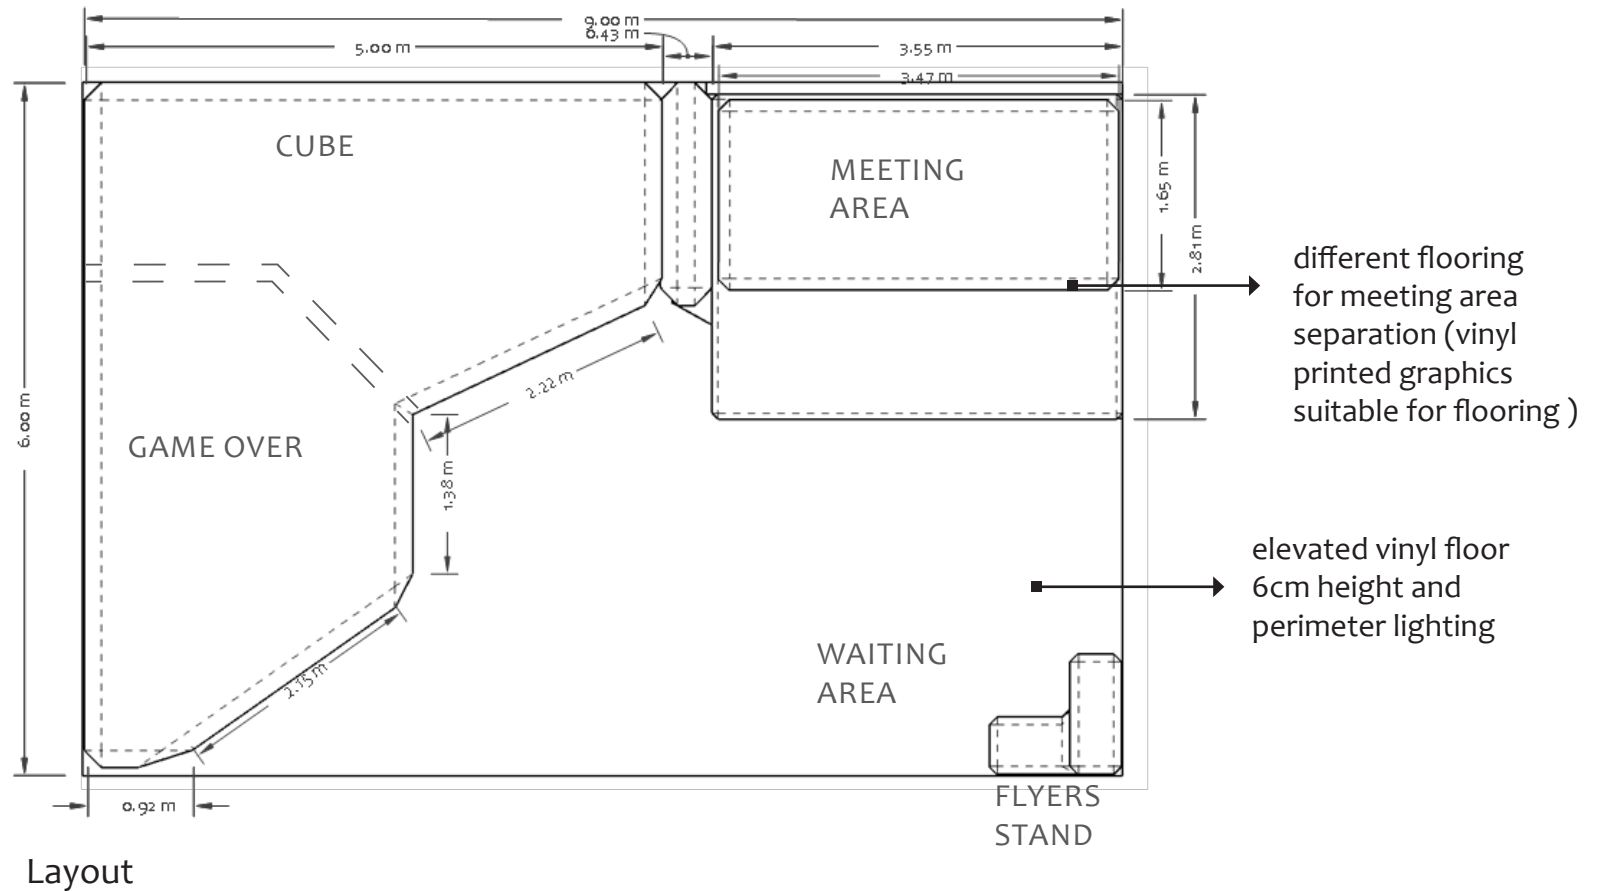

NOTES

- 2 65-inch built-in monitors to rent with usb port available (as shown on the renders at pg.3). Placed in recess in the walls.
- Graphic wall wraps on all surfaces **except** for those indicated on the previous slides (i.e. light boxes, lacquer technic painted panels). **The pvc fabric printed graphics** are indicated on the renders with grey color, whereas the painted surfaces are shown with orange-red color.
- Colors and graphics to be decided in later stage
- For flooring (general area and meeting area) samples will be needed to choose from.

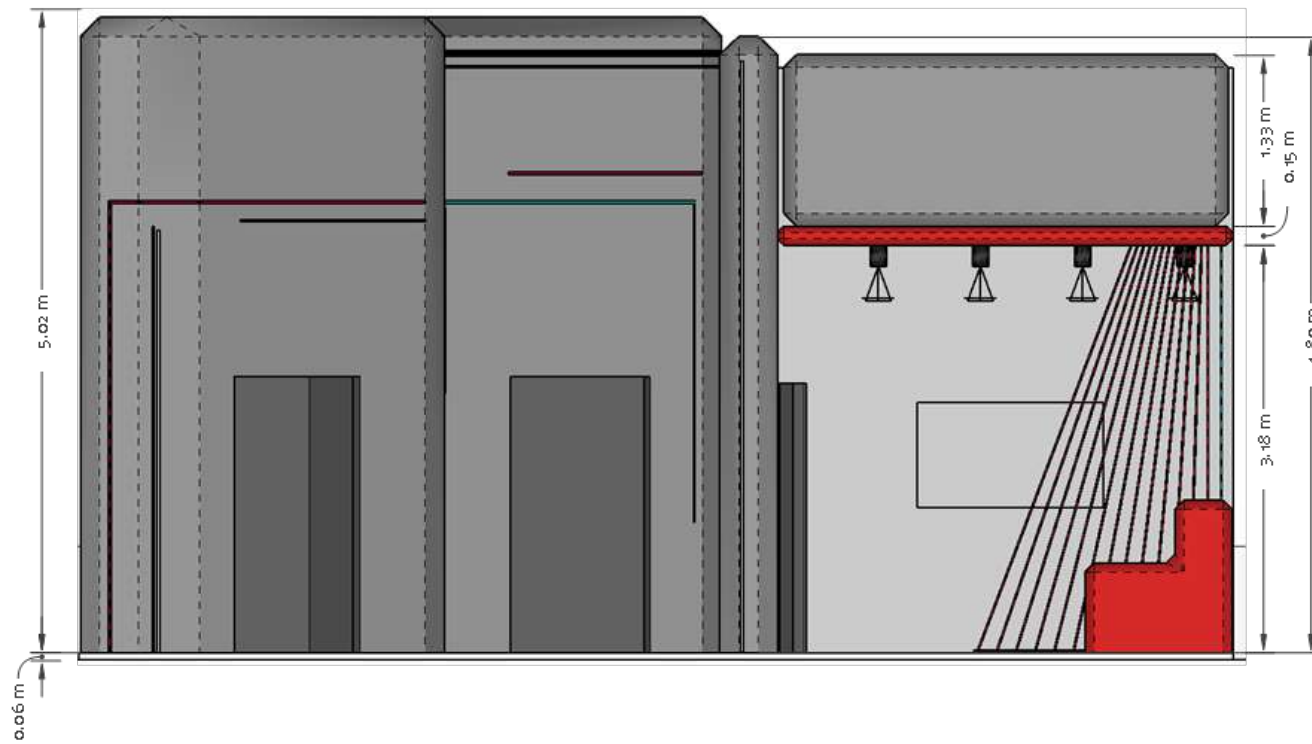

Concept 2

Concept 2

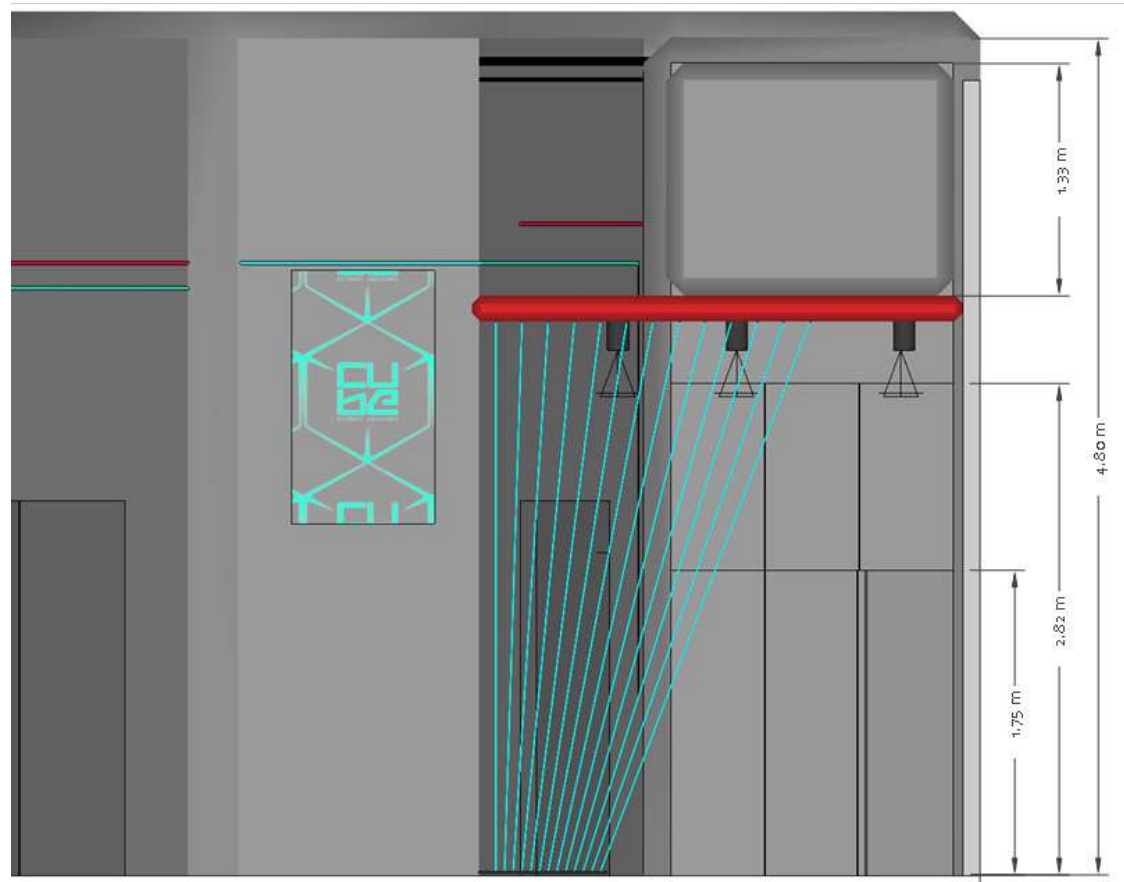

Concept 2

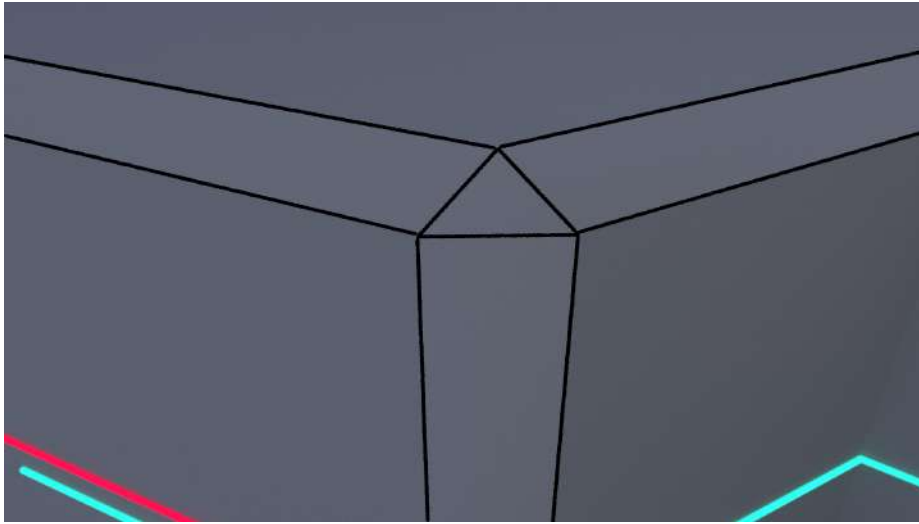

Front view - parallel

Concept 2

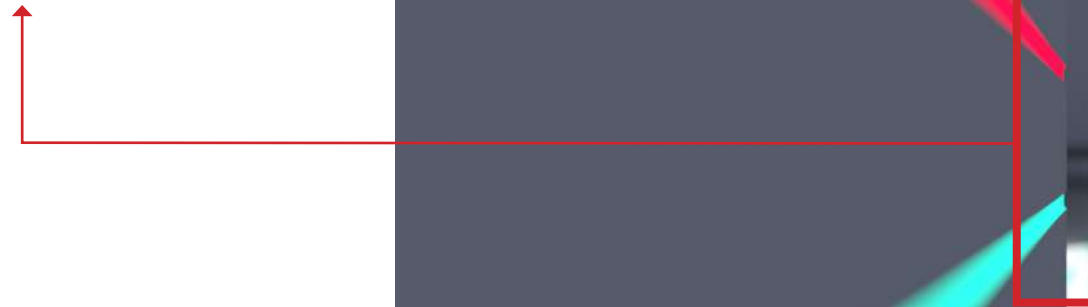

Right side view - parallel

Concept 2

This concept's main idea is these beveled corners that are created as shown in this picture and also on the previous renderings

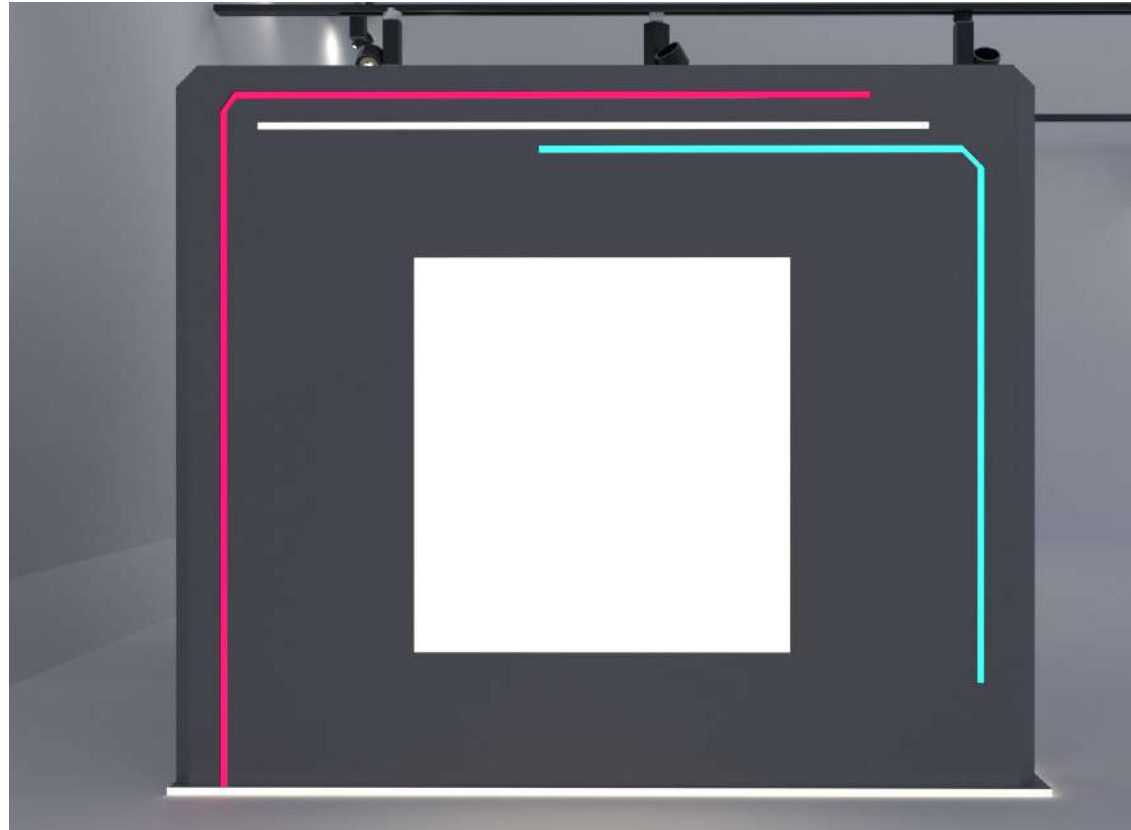

all led stripes on the main tower are indented on the walls covered with plexiglas.

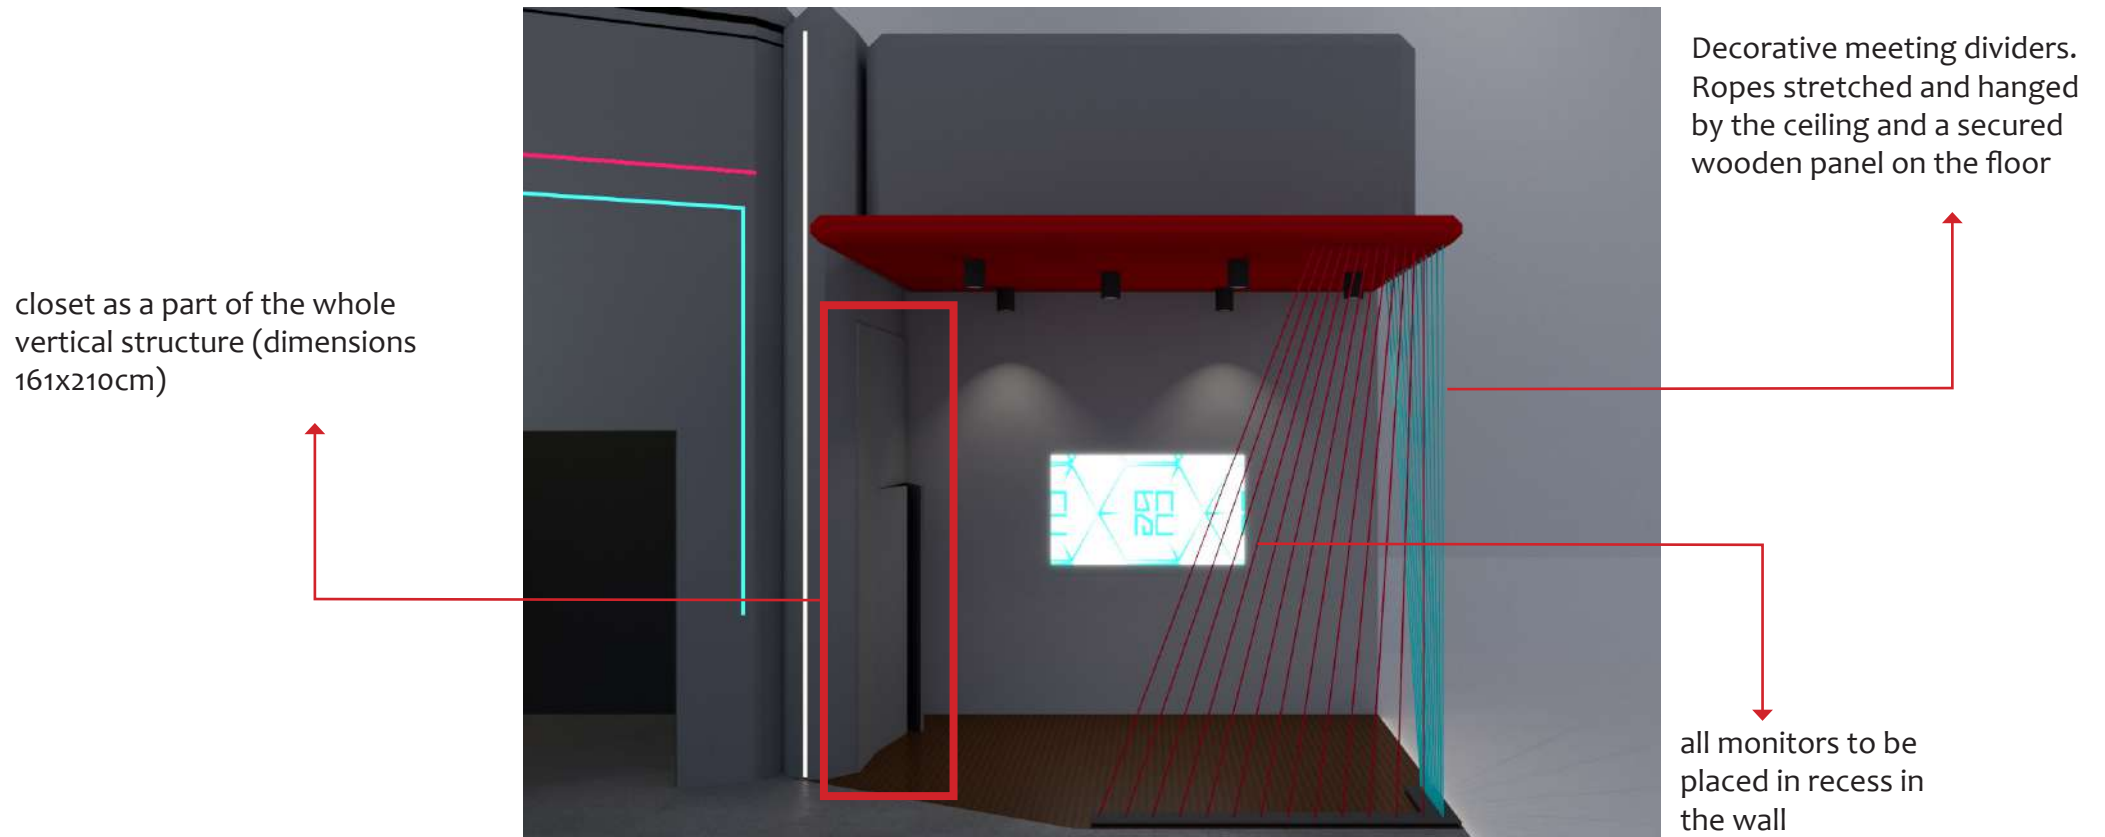

Concept 2

At the center of the left booth side wall (dimensions 496x600cm) we want to place a lightbox at the center with approximate overall size ~254x267cm. The lightbox structure will be placed aligned with the surface (basic structure inside the wall), as shown. Pattern and specified shape will be decided on a later stage.

As was suggested on the previous concept, the lightboxes will have graphics placed on the inner side of the surface (i.e pvc fabric printed graphic)
